Flood Warning – Similkameen (Princeton and upstream), Tulameen

High Streamflow Advisory – Coldwater, Central Coast, South Coast, Vancouver Island

Issued: 7:45 AM December 11, 2025

The River Forecast Centre is **upgrading** to a Flood Warning for:

- Similkameen River tributaries including headwater tributaries at and upstream of Princeton
- Tulameen River

The River Forecast Centre is **maintaining** a High Streamflow Advisory for:

- Ashnola River (DOWNGRADED)
- Coldwater River
- Central Coast including the Kingcome River, Wannock River and surrounding basins
- South Coast including Howe Sound, North Shore Mountains and Metro Vancouver
- Vancouver Island

Rainfall has eased through the region, however rivers are still responding to runoff from rain and snowmelt.

Flows continue to rise to very high levels along tributaries of the Similkameen River at and upstream of Princeton, including the Pasayten River, upper Similkameen, and Tulameen Rivers, with current observed flows (7AM) in the 10-year to 100-year range. Additional rises are expected this morning at Princeton.

Flows in other areas have largely crested for this event, however they remain high.

Heavy rain and high streamflow bring increased risk for unstable banks, river erosion, submerged roads, swift water hazards, flooding and landslides. Stay clear of the banks of swift running rivers and never drive across flooded roads, bridges or river crossings. At this time of year leaves can clog storm drains and impact urban drainage. Keep storm drains clear.

Review personal flood emergency plans and be prepared to implement if needed. Information on local flood response, including evacuation alerts and orders, is available from local governments and First Nations.

Ministry of Water, Land and Resource Stewardship

A **High Streamflow Advisory** means that river levels are rising or expected to rise rapidly, but that no major flooding is expected. Fast-flowing bodies of water increase risk to life safety. Minor flooding in low-lying areas is possible.

A **Flood Watch** means that river levels are rising and will approach or may exceed bankfull. Flooding of areas adjacent to affected rivers may occur.

A **Flood Warning** means that river levels have exceeded bankfull or will exceed bankfull imminently, and that flooding of areas adjacent to the rivers affected will result.
