BC River Forecast Centre

UPDATE – High Streamflow Advisory: Southwest and Southeast Peace Region Issued: 13 July 2011 8:15 AM

The BC River Forecast Centre is **downgrading** the Flood Watch to a **High Streamflow Advisory** for:

- Southeast Peace Region

The BC River Forecast Centre is **maintaining** the **High Streamflow Advisory** for:

- Southwest Peace Region

Rainfall has eased in the Peace Region and river levels have been dropping throughout the region since Sunday or Monday. Most rivers are now below levels of concern.

Environment Canada is forecasting another low pressure system through the Interior of British Columbia which may develop additional moisture over the Peace Region. Rainfall amounts in the 15 to 25 mm are expected, with the potential for higher amounts locally. River levels are expected to have a moderate rise Thursday and Friday in response to this rainfall.

The River Forecast Centre will continue to monitor conditions and will provide an update as conditions warrant. Current streamflow information is available from the River Forecast Centre website:

<http://bcrfc.env.gov.bc.ca/>.

A **High Streamflow Advisory** means that river levels are rising or expected to rise rapidly, but that no major flooding is expected. Minor flooding in low-lying areas is possible.

A **Flood Watch** means that river levels are rising and will approach or may exceed bankfull. Flooding of areas adjacent to affected rivers may occur.

A **Flood Warning** means that river levels have exceeded bankfull or will exceed bankfull imminently, and that flooding of areas adjacent to the rivers affected will result.
