BC River Forecast Centre

High Streamflow Advisory: Howe Sound (South) and North Shore Mountains

Issued: 26 September 2011 6:45 PM

The BC River Forecast Centre is **issuing a High Streamflow Advisory** for:

- **Howe Sound – South**
- **North Shore Mountains** (including Seymour River, Capilano Creek, Lynn Creek and Coquitlam River and surrounding areas)

Heavy rain has been falling through the day in Howe Sound and areas of the North Shore Mountains. Rainfall rates over the past 12 hours has been in 38 mm at the MoTI Weather Station at Mt. Strachan and 66 mm at the Water Survey of Canada gauge at Coquitlam River above Coquitlam Lake (08MH141).

Rivers have been responding to this rainfall. The Coquitlam River above Coquitlam Lake (08MH141) is currently at 72 m³/s, and is rising at 15 cm/hour. The Seymour River below Orchid Creek is currently at 79 m³/s, and rising at 10 cm/hour.

Environment Canada has issued a rainfall warning for Howe Sound, with additional rainfall amounts of 40 mm to 60 mm forecasted through Tuesday morning. Rivers are expected to continue to rise overnight in response to this rain.

The River Forecast Centre will continue to monitor conditions and will provide updates as conditions warrant.

A **High Streamflow Advisory** means that river levels are rising or expected to rise rapidly, but that no major flooding is expected. Minor flooding in low-lying areas is possible.

A **Flood Watch** means that river levels are rising and will approach or may exceed bankfull. Flooding of areas adjacent to affected rivers may occur.

A **Flood Warning** means that river levels have exceeded bankfull or will exceed bankfull imminently, and that flooding of areas adjacent to the rivers affected will result.
