Flood Watch – Kingcome River

Issued: 8:45 AM August 19, 2025

The River Forecast Centre is **issuing** a Flood Watch for:

- Kingcome River

Weather Synopsis:

A period of wet weather since the weekend has brought significant rainfall through the central Coast Mountains. Cumulative precipitation since Friday in the 80-125mm range has been observed through the region. Additional rainfall, in the order of 5-50 mm over the next day is currently forecasted in weather modelling for the region.

River Conditions:

River levels have remained high since the weekend. Current water level at Kingcome River below Atlatzi River (Water Survey of Canada gauge 08GF009) is at 8.63m (estimated around a 20-year return period level). Upstream areas near the village of Kingcome may reach low-level flood stage later on Tuesday, with higher flows possible if heavy rainfall scenarios occur today.

The [River Forecast Centre](#) continues to monitor the conditions and will provide updates as conditions warrant.

Ministry of Water, Land and Resource Stewardship

A **High Streamflow Advisory** means that river levels are rising or expected to rise rapidly, but that no major flooding is expected. Fast-flowing bodies of water increase risk to life safety. Minor flooding in low-lying areas is possible.

A **Flood Watch** means that river levels are rising and will approach or may exceed bankfull. Flooding of areas adjacent to affected rivers may occur.

A **Flood Warning** means that river levels have exceeded bankfull or will exceed bankfull imminently, and that flooding of areas adjacent to the rivers affected will result.
