Flood Watch – North Coast (UPGRADE)

High Streamflow Advisory – Haida Gwaii

Issued: 2:30 PM November 9, 2025

The River Forecast Centre is **upgrading** to a **Flood Watch** for:

- North Coast including tributaries and smaller streams around Stewart, Gitlaxt'aamiks (New Aiyansh), Terrace, Prince Rupert, Kitimat, and other coastal communities

The River Forecast Centre is **maintaining** a **High Streamflow Advisory** for:

- North Coast including tributaries and smaller streams around Stewart, Gitlaxt'aamiks (New Aiyansh), Terrace, Prince Rupert, Kitimat, and other coastal communities
- Haida Gwaii

Weather Synopsis:

An atmospheric river has been impacting Haida Gwaii and the North Coast since Saturday. Rainfall has eased on Haida Gwaii, however a rainfall warning from Environment and Climate Change Canada remains in effect for the North Coast. Total rainfall amounts since yesterday have been in the 65 to 95 mm range. Additional amounts of 20 to 40mm are forecast through this evening, with higher amounts possible over higher terrain.

River Conditions:

Rivers have been rising rapidly. On Haida Gwaii, peak flows occurred earlier in the day, with flows reaching 5-year to 20-year flows in areas. On the North Coast, rivers around Kitimat continue to rise. Current flows are in the 2-year to 20-year range around Kitimat. Additional rises are possible this afternoon through evening.

Flows are expected to be near peak levels in smaller creeks, with additional rises through this evening on mid-sized and larger watersheds. Rivers should recede on Monday.

Heavy rain and high streamflow bring increased risk for unstable banks, river erosion, submerged roads, swift water hazards, flooding and landslides. Stay clear of the banks of swift running rivers and never drive across flooded roads, bridges or river crossings. At this time of year leaves can clog storm drains and impact urban drainage. Keep storm drains clear.

The [River Forecast Centre](#) continues to monitor the conditions and will provide updates as conditions warrant.

Ministry of Water, Land and Resource Stewardship

A **High Streamflow Advisory** means that river levels are rising or expected to rise rapidly, but that no major flooding is expected. Fast-flowing bodies of water increase risk to life safety. Minor flooding in low-lying areas is possible.

A **Flood Watch** means that river levels are rising and will approach or may exceed bankfull. Flooding of areas adjacent to affected rivers may occur.

A **Flood Warning** means that river levels have exceeded bankfull or will exceed bankfull imminently, and that flooding of areas adjacent to the rivers affected will result.
