Flood Watch – Haida Gwaii, North Coast

Issued: 9:30 AM December 27, 2025

The River Forecast Centre is **issuing** a Flood Watch for:

- Haida Gwaii
- North Coast (outer coastal areas)

Weather Synopsis:

A weather system is expected to enter into the north coast of British Columbia and Alaska on Sunday, bringing heavy rain and rising temperatures. Environment and Climate Change Canada has issued rainfall warnings for the North Coast – coastal sections, and winter storm warnings for inland coastal areas. Weather modelling is indicating the potential for localized rainfall amounts of 100-150mm, or higher, from Sunday through Monday. Temperatures are forecast to rise to 6-9°C in outer coast areas near sea level, and freezing levels around 2000m. Strong temperature gradients are anticipated moving from coastal to inland areas, with temperatures on Monday forecast to be 7-9°C in Prince Rupert and 1°C in Kitimat and Terrace.

River Conditions:

Localized high flows are expected due to heavy rainfall rates and rain-on-snow melt runoff in outer coastal areas near Prince Rupert and on Haida Gwaii. Hazards include swiftwater, road washouts and increased potential of landslide activity. High flows are anticipated through the storm on Sunday and Monday.

Cooler temperatures and lower amounts of precipitation in more inland areas, including Kitimat, Terrace and the Nass Valley, are indicating that high flows are less likely in these areas, with hazards being more weather related to wintery storm conditions.

The [River Forecast Centre](#) continues to monitor the conditions and will provide updates as conditions warrant.

Ministry of Water, Land and Resource Stewardship

A **High Streamflow Advisory** means that river levels are rising or expected to rise rapidly, but that no major flooding is expected. Fast-flowing bodies of water increase risk to life safety. Minor flooding in low-lying areas is possible.

A **Flood Watch** means that river levels are rising and will approach or may exceed bankfull. Flooding of areas adjacent to affected rivers may occur.

A **Flood Warning** means that river levels have exceeded bankfull or will exceed bankfull imminently, and that flooding of areas adjacent to the rivers affected will result.
