BC River Forecast Centre

Kettle and Kootenay Regions Flood Warning, Flood Watch, High Streamflow Advisories – ENDED 18May2011 7:10 AM

The BC River Forecast Centre is **ending** the Flood Warning for the West Kettle River, the Flood Watch for the Kettle River, and the High Streamflow Advisory for the Granby River, Salmo River and Moyie River.

River levels peaked early on Tuesday, May 17th, and have been receding since then. The West Kettle River at Westbridge (WSC 08NN003) peaked at a 10-year flow of 165 m³/s. The Kettle River, Granby River, Salmo River and Moyie River all peaked below their 2-year flow levels.

River levels are now below levels of concern. A high pressure ridge is forecast to move through British Columbia over the next few days and Environment Canada is forecasting warmer temperatures through the region. River levels may rise again later in the week with the warmer weather and increased snow melt rates.

The River Forecast Centre will continue to monitor conditions and will provide an update as conditions warrant.

A **High Streamflow Advisory** means that river levels are rising or expected to rise rapidly, but that no major flooding is expected. Minor flooding in low-lying areas is possible.

A **Flood Watch** means that river levels are rising and will approach or may exceed bankfull. Flooding of areas adjacent to affected rivers may occur.

A **Flood Warning** means that river levels have exceeded bankfull or will exceed bankfull imminently, and that flooding of areas adjacent to the rivers affected will result.
