BC River Forecast Centre

UPDATE: Flood Watch: Elk River (Maintain)

Issued: 24 June 2013 02:00 PM

The BC River Forecast Centre is maintaining the **Flood Watch Advisory** for:

- Elk River (at Fernie)

The Elk River at Fernie (08NK002) is now flowing at 427 m³/s, a flow slightly lower than 10 year return period, and the water level is 3.464 m. The water level is receding but could rise again with further rainfall. Environment Canada is forecasting variable rain across the region for the next 2 days.

The River Forecast Centre will continue to monitor conditions and will provide updates as required.

A **High Streamflow Advisory** means that river levels are rising or expected to rise rapidly, but that no major flooding is expected. Minor flooding in low-lying areas is possible.

A **Flood Watch** means that river levels are rising and will approach or may exceed bankfull. Flooding of areas adjacent to affected rivers may occur.

A **Flood Warning** means that river levels have exceeded bankfull or will exceed bankfull imminently, and that flooding of areas adjacent to the rivers affected will result.
