High Streamflow Advisory – North Coast

ISSUED: 2:30 PM November 19, 2021

The River Forecast Centre is issuing a High Streamflow Advisory:

- **North Coast including Haida Gwaii and areas around Prince Rupert, Kitimat, Hartley Bay, Kemano and surrounding areas**

A period of adverse weather is expected to impact the North Coast over the weekend. On Friday, a weak to moderate system is expected to bring moderate rainfall and snow. On Saturday, an atmospheric river is expected to make landfall, bringing heavier rainfall and warming temperatures from mid-day Saturday through to early Monday. Total rainfall amounts across the event could reach 200-300mm, with highest amounts expected on the outer coast between Prince Rupert and Ocean Falls, and decreasing amounts moving inland. Snowmelt at low-to-mid elevations is expected to add to runoff. Inland areas, including the Bulkley Valley, are not currently forecast to receive significant rainfall, however if the system pushes across the Coast Mountains the region could also experience higher flows from rain and snowmelt.

Rivers are expected to rise rapidly overnight Saturday and through Sunday. Flooding is not anticipated at this time, however forecasts and conditions can change rapidly.

The public is advised to stay clear of the fast-flowing rivers and potentially unstable riverbanks during the high-streamflow period.

Details of the COFFEE and CLEVER Model forecasts can be found at:

Ministry of Forests, Lands, Natural Resource Operations and Rural Development

A **High Streamflow Advisory** means that river levels are rising or expected to rise rapidly, but that no major flooding is expected. Minor flooding in low-lying areas is possible.

Ministry of Forests, Lands, Natural Resource Operations and Rural Development

A ***Flood Watch*** means that river levels are rising and will approach or may exceed bankfull. Flooding of areas adjacent to affected rivers may occur.

A ***Flood Warning*** means that river levels have exceeded bankfull or will exceed bankfull imminently, and that flooding of areas adjacent to the rivers affected will result.
