(UPDATE) High Streamflow Advisory – North Coast

Issued: 3:45PM October 27, 2022

The River Forecast Centre is **maintaining a High Streamflow Advisory** for:

- **North Coast**

A frontal system brought moderate to heavy rainfall across the North Coast yesterday and early this morning and rivers rose rapidly in response to the rainfall. Rivers and creeks reached up to 2-year to 5-year return period flows, particularly surrounding Kitimat and Haida Gwaii.

Additional storms over the upcoming three days could cause additional rises in the region.

The public is advised to stay clear of the fast-flowing rivers and potentially unstable riverbanks during the high-streamflow period.

The [River Forecast Centre](#) continues to monitor the conditions and will provide updates as conditions warrant.

BC River Forecast Centre

Ministry of Forests

A **High Streamflow Advisory** means that river levels are rising or expected to rise rapidly, but that no major flooding is expected. Minor flooding in low-lying areas is possible.

A **Flood Watch** means that river levels are rising and will approach or may exceed bankfull. Flooding of areas adjacent to affected rivers may occur.

A **Flood Warning** means that river levels have exceeded bankfull or will exceed bankfull imminently, and that flooding of areas adjacent to the rivers affected will result.
