Central Update:

High Streamflow Advisory – South Thompson (DOWNGRADED), Bonaparte River (MAINTAINED), Shuswap and Tributaries of South Thompson (ENDED), Thompson River (ENDED)

Issued: 9:30 AM May 29, 2023

The River Forecast Centre is updating the following:

- South Thompson River – High Streamflow Advisory (DOWNGRADED)
- Bonaparte River - High Streamflow Advisory (MAINTAINED)
- Tributaries of the South Thompson River including the Salmon River, Eagle River, Adams River and surrounding areas - ENDED
- Shuswap River – ENDED
- Thompson River downstream of Kamloops Lake – ENDED

River Conditions:

River levels on the Bonaparte River remain high following rainfall runoff last week. On the South Thompson River, levels have reached peak levels, but have yet to experience a declining trend. Levels are expected to remain high over the coming days before receding, and no significant additional river rises are expected at this time.

The public is advised:

River levels are rising or expected to rise rapidly. Being near these riverbanks, creeks and fast-flowing bodies of water is dangerous:

- Stay clear of fast-flowing rivers and potentially unstable riverbanks
- Avoid recreational activities such as fishing, swimming, boating or hiking near high streamflow rivers or streams
- Remember, high streamflow can easily trap strong swimmers, increasing risk of drowning

Understand the risks and get prepared by visiting www.PreparedBC.ca/floods.

Ministry of Forests

A **High Streamflow Advisory** means that river levels are rising or expected to rise rapidly, but that no major flooding is expected. Fast-flowing bodies of water increase risk to life safety. Minor flooding in low-lying areas is possible.

A **Flood Watch** means that river levels are rising and will approach or may exceed bankfull. Flooding of areas adjacent to affected rivers may occur.

A **Flood Warning** means that river levels have exceeded bankfull or will exceed bankfull imminently, and that flooding of areas adjacent to the rivers affected will result.
