High Streamflow Advisory – Coldwater River, Similkameen River and Skagit River

Issued: 2:45 PM December 15, 2025

The River Forecast Centre is **issuing** a High Streamflow Advisory for:

- Coldwater River and surrounding areas
- Similkameen River and tributaries including upstream Tulameen River
- Skagit River and surrounding areas

Weather Synopsis:

A series of atmospheric rivers (AR) have moved into British Columbia since Sunday and are expected to continue through this week. The soil moisture has been saturated by the previous AR events. Additional 10 to 25 mm of 24-hour precipitation is expected for these regions for the coming days. Warmer than normal temperatures are also expected and will trigger more snowmelt.

River Conditions:

The river levels are currently relatively high and rising. The latest hydrological modeling demonstrates that the streamflows in these rivers are expected to rise to the 2 to 5-year return period levels and peaked tonight, drop slightly tomorrow and then rise again on Wednesday.

Heavy rain and high streamflow bring increased risk for unstable banks, river erosion, submerged roads, swift water hazards, flooding and landslides. Stay clear of the banks of swift running rivers and never drive across flooded roads, bridges or river crossings. At this time of year leaves can clog storm drains and impact urban drainage. Keep storm drains clear.

The [River Forecast Centre](#) continues to monitor the conditions and will provide updates as conditions warrant.

Ministry of Water, Land and Resource Stewardship

A **High Streamflow Advisory** means that river levels are rising or expected to rise rapidly, but that no major flooding is expected. Fast-flowing bodies of water increase risk to life safety. Minor flooding in low-lying areas is possible.

Ministry of Water, Land and Resource Stewardship

A ***Flood Watch*** means that river levels are rising and will approach or may exceed bankfull. Flooding of areas adjacent to affected rivers may occur.

A ***Flood Warning*** means that river levels have exceeded bankfull or will exceed bankfull imminently, and that flooding of areas adjacent to the rivers affected will result.
